# FOREST STEWARDSHIP MANAGEMENT PLAN

Prepared For:  
Quitman School District

Prepared By:  
T Michael Crowell  
MFC

Time Period Covered by This Plan:  
2012 - 2021

Date Plan Prepared:  
2012-01-23

Plan Type:  
Stewardship / Stewardship

This plan was developed in accordance with the rules of the Stewardship program.

**Property Name: S16\_2N\_R14E**

FOREST STEWARDSHIP MANAGEMENT PLAN**

**LANDOWNER INFORMATION**

Name: Quitman School District  
Mailing Address: 104 East Franklin Street  
City, State, Zip: Quitman, MS 39355  
Country: United States of America  
Contact Numbers: Home Number:  
Office Number: 601-776-2186  
Fax Number:  
E-mail Address: gfleming@qsd.k12.ms.us  
Social Security Number (optional): 640442029

**FORESTER INFORMATION**

Name: T Michael Crowell , Service Forester  
Forester Number: 01207  
Organization: MFC  
Street Address: P.O. Box 174  
City, State, Zip: Quitman, MS 39355  
Contact Numbers: Office Number: 601-776-6213  
Fax Number: 601-776-1010  
E-mail Address: mcrowell@mfc.state.ms.us

**PROPERTY LOCATION**

County: Clarke    Total Acres: 640    Latitude: -88.87    Longitude: 32.01  
Section: 16    Township: 2N    Range: 14E

**DISCLAIMER**

This information was derived from a small sampling of the forest resources. It reflects a statistical estimation that is only intended to be accurate enough for the purposes of making decisions for the short-term management of these resources. These estimations are temporally static. Events and circumstances may occur within the survey area that will physically alter the forest resources and therefore will not be reflected in this plan.

**INTRODUCTION**

This Forest Stewardship Management Plan will serve as a guide for accomplishing the goals and objectives for your property. In addition to addressing your specific goals and objectives, this plan includes recommendations for maintaining soil and water quality and protecting your forest from insects, disease, and wildfire. Recommendations are based on observation and assessment of the site.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

**OBJECTIVES**

*Timber Production*

The goal is to produce high quality sawtimber. This will be accomplished through reforestation and timber stand improvement practices such as herbicide applications, prescribed burning, thinning at specified intervals, and other silvicultural practices. Forestry Best Management Practices will be implemented to prevent erosion and protect water quality.

*Wildlife Management - General*

The goal is to provide a diversity of habitats suitable for a variety of game and non-game wildlife species. Habitat management will focus on developing a variety of food, cover, water, and space. This will be accomplished by establishing and maintaining access roads and firelanes, providing openings within the forest, and the management of trees located within the Streamside Management Zone

**PROPERTY DESCRIPTION**

*General Property Information*

General

This section consists of approximately one full section of land (641.42 acres), and is located approximately two miles southeast of Pachuta, Mississippi. County Road 289 dead ends into north central portion of this section on the north line. The topography is level and Pachuta Creek flows in an easterly direction through the south half of this section. One pipeline and two power transmission lines cross this section. The entire section is timbered land except a 49.24 non-forest. The non-forest consists of utility right of way and a beaver pond. Access to the section is good from the north and difficult from the Old Stage Coach Road on the south over a prairie clay road.

History

Silviculture work has been accomplished on this section since the signing of the first Timber Management and Marketing Agreement between the Board of Supervisors and the Mississippi Forestry Commission. Good Silvicultural Forestry Management Practices are maintained as needed. Fire lane and road maintenance is done when needed. Boundary Lines are brushed out and repainted on a regular basis.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

**Wildlife and Recreation**

Hunting is the primary form of recreation taking place on this section, although some fishing is being done on Pachuta Creek. Game species most frequently hunted are deer, squirrel, and turkey. There is some very good habitat for this species. This entire section has great potential for wildlife especially in the hardwood stands near Pachuta Creek, therefore any timber management practices to be implemented should consider the recreational and wildlife management aspects as much as feasible.

**Problems**

The biggest problem on this section in regard to timber management is the poor access to the southern part of the section. Access to the southern part is limited because of adjoining landowners. Access is limited during wet seasons due to lowness of the area and the heavy clay soil.

*Water Resources*

Pachuta Creek flows in an easterly direction through the south half of this section. However, intermittent streams and drains identified will be managed in accordance with Mississippi Best Management Practices.

*Timber Production*

The goal is to maximize the production of high quality timber. This will be accomplished through the application of timely thinning and other silvicultural practices designed to enhance timber quality and growth. Forestry Best Management Practices will be implemented to prevent erosion and protect water quality.

*Archeological or Cultural Resources:*

No Archeological or Cultural resources were identified during a reconnaissance of the property. However, if Archeological or Cultural resources are discovered anytime on the property special managements measures will be applied immediately in order preserve these sensitive areas.

*Threatened and Endangered Species*

No threatened and endangered species were identified during the reconnaissance and evaluation of your property.

*Interaction with Surrounding Property*

Prescribed practices should be carried out in a manner that will minimize adverse impacts on surrounding properties. Consideration should be given to potential air, water, visual, and other impacts. In addition, practices carried out should have positive effects on the surrounding community such as improved wildlife habitat and soil stabilization.

*Soils General*

Soils were evaluated on the property to determine the suitability of the site for the proposed activities. Forest practices were planned so as to minimize erosion or other adverse effects on the soil. The following soils are identified for this property from soils

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

index map number 64 of the 1961 soil survey of Clarke County: Pheba, Mashulaville, Bibb/Chastain, Houlika, West Point, Sumpter, Stough, and Tilden.

## **GENERAL PROPERTY RECOMMENDATIONS**

### *Forest Protection*

A healthy vigorously growing stand is the best defense to an attack from a variety of forest insects, plants and pathogens.

#### Insects and Diseases

Trees are subject to attack from insects and diseases. Different insects and diseases affect trees according to the age, species, and condition of the trees. Planted stands of pines and pure stands of hardwoods are particularly susceptible to attack. Since there are many different insects and diseases, no attempt will be made here to explain all of them. The property should be inspected at least annually for possible signs of insect and disease activity. Some things to look for are:

- Unseasonable leaf fall
- Discoloration of leaves or needles
- Pitch pockets on pine trees
- Heavy defoliation of hardwood leaves
- Groups of three or more dying trees within a stand

This list does not cover all instances of insect or disease attacks. If anything unusual is noticed, report it to a forester. In most cases, insect and disease problems can be controlled if discovered early.

### Fire Protection

Your forest should be protected from wildfire at all times. The best way to protect your investment is by establishing and maintaining firebreaks around the property. Guidelines for establishment and maintenance of firebreaks may be found in Mississippi Forestry Commission publication #107, *Mississippi's Best Management Practices*.

### Grazing

Tree seedlings should be protected from grazing until such time as the terminal bud of the sapling is beyond reach of livestock. Domestic livestock should be denied access to the tree planting area.

### Boundary Lines

It is the responsibility of the landowner to ensure that all property lines and boundaries designating areas to receive forestry work are clearly identified and visible to all contractors. Boundary lines will be maintained on a five year rotation.

**Note:** Some forest practices may cause temporary adverse environmental or aesthetic impacts. These practices will only cause short-term adverse impacts where they are installed. Special efforts will be made to minimize adverse effects when carrying out any of the practices. Examples include: site preparation, planting, prescribed fires, firebreak installation and maintenance, road installation and maintenance, pesticide applications

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

and timber harvesting.

*Water Quality Protection*

The objective of the landowner is to protect, preserve and enhance all water sources on or transecting the property. This can best be achieved by implementation of Best Management Practices in all aspects of the management of the property.

*Aesthetics*

The goal is to assure that the property is managed in such a way that is aesthetically pleasing to the landowner as well as the community. Activities could include, maintaining buffer strips along the road and adjacent to the home site, planting wildflowers along the road, and trees with attractive fall and spring color along the drive and near the home site.

*Ecological Restoration*

Ecological restoration is the process of assisting the recovery of an ecosystem that has been degraded, damaged, or destroyed. A reconnaissance of the property has been conducted and no ecological restoration activities are recommended at this time.

*Wildlife Mgt. Target Species*

The objective of this practice is to provide habitat best suited for the featured or target species. Habitat management will focus on providing food, cover, water, and space to facilitate the target species.

*Environmental Education*

Environmental educational goals are to provide educational opportunities for children and adults through the development of items such as nature trails with tree identification markers, wildlife viewing areas, picnic areas, parking, public restroom facilities.

*Wildlife Management General*

The goal is to provide a diversity of habitats suited for a variety of game and non-game wildlife species. Habitat management will focus on providing a variety of food, cover, water, and space. This will be accomplished, in part, by establishing and maintaining access roads and firelanes, providing openings within the forest, and leaving mast producing and den trees.

*Timber Management*

Timber management goals for this property are to manage timber resources in such a manner as to maximize timber production throughout the life of the stand.

*Recreation*

According to landowner objectives the recreational use of the property could prove to be an avenue for personal enjoyment or for generating income. An evaluation of your property should be conducted and a plan developed to accomplish your specific goals for recreational activities on your property.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

**SOIL TYPES**

*Griffith*

The Griffith component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains. The parent material consists of clayey alluvium deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches is high. Shrink-swell potential is very high. This soil is occasionally flooded. It is not ponded. A seasonal zone of water saturation is at 24 inches during January, February, March. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.

*Sumter*

The Sumter component makes up 90 percent of the map unit. Slopes are 5 to 12 percent. This component is on uplands. The parent material consists of clayey marine deposits. Depth to a root restrictive layer, bedrock, paralithic, is 20 to 40 inches. The natural drainage class is well drained. Water movement in the most restrictive layer is moderately low. Available water to a depth of 60 inches is low. Shrink-swell potential is moderate. This soil is not flooded. It is not ponded. There is no zone of water saturation within a depth of 72 inches. Organic matter content in the surface horizon is about 4 percent. Nonirrigated land capability classification is 7e. This soil does not meet hydric criteria.

*Vaiden*

The Vaiden component makes up 90 percent of the map unit. Slopes are 5 to 8 percent. This component is on uplands. The parent material consists of clayey marine deposits derived from chalk. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches is moderate. Shrink-swell potential is very high. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, March, November, December. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 4e. This soil does not meet hydric criteria. Loblolly Site Index = 79.

*Savannah*

The Savannah component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on coastal plains. The parent material consists of loamy alluvium deposits. Depth to a root restrictive layer, fragipan, is 16 to 38 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches is moderate. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 24 inches during January, February, March. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria. Loblolly Site Index = 88. Longleaf Site Index = 78. Slash Site Index = 88.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

*Stough*

The Stough component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on terraces. The parent material consists of loamy alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 14 inches during January, February, March, April. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria. Loblolly Site Index = 90. Slash Site Index = 86.

*Mashulaville*

The Mashulaville component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on depressions. The parent material consists of loamy alluvium. Depth to a root restrictive layer, fragipan, is 16 to 34 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches is low. Shrink-swell potential is low. This soil is not flooded. It is not ponded. A seasonal zone of water saturation is at 9 inches during January, February, March, April. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 4w. This soil meets hydric criteria. Loblolly Site Index = 85.

*Houlka*

The Houlka component makes up 90 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains. The parent material consists of clayey alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is somewhat poorly drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches is high. Shrink-swell potential is high. This soil is occasionally flooded. It is not ponded. A seasonal zone of water saturation is at 18 inches during January, February, March. Organic matter content in the surface horizon is about 1 percent. Nonirrigated land capability classification is 2w. This soil does not meet hydric criteria.

*Bibb*

The Bibb component makes up 60 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains. The parent material consists of sandy and loamy alluvium deposits. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is moderately high. Available water to a depth of 60 inches is moderate. Shrink-swell potential is low. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 9 inches during January, February, March, April, December. Organic matter content in the surface horizon is about 2 percent. Nonirrigated land capability classification is 5w. This soil meets hydric criteria. The Una component makes up 30 percent of the map unit. Slopes are 0 to 2 percent. This component is on flood plains. The parent material consists of clayey alluvium. Depth to a root restrictive layer is greater than 60 inches. The natural drainage class is poorly drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches is high. Shrink-swell potential is high. This soil is frequently flooded. It is not ponded. A seasonal zone of water saturation is at 9 inches during January, February, March, April, November, December. Organic matter content in the surface

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

horizon is about 2 percent. Nonirrigated land capability classification is 4w. This soil meets hydric criteria.

**STRATA**

*Strata 1*

Stands 10, 11, 24, and 25

Total Acres : 25.04

Strata Description

Strata 1 is described as pine chipnsaw.

Stand 10: 8.23 acres

Stand 11: 8.11 acres

These two (2) stands are 26 year old, under stocked, natural pine plantations.

Stand 24: 6.73 acres

Stand 25: 1.97 acres

These two (2) stands are 25 year old,well stocked, pine plantations.

Strata Recommendations

In this strata, the stands will be managed to a 35 year rotation. During this time frame, management activities such as thinnings, mid-rotation release, and prescribed burning to improve wildlife habitat will be used to keep stands in full production.

Activity Recommendations

Harvest

A thin will be made on stand 24 and 25 in 2013.

A regeneration harvest will be made on stand 10 and 11 in 2013.

The area will be cruised to determine how much volume will be removed as well as the value of the timber to be removed.

Fire Protection

A prescribed fire is recommended for stands 24 and 25 in 2012, 2016 and again in 2019. The burn will reduce fuel loading and the potential for a wildfire to occur. A prescribed burning plan must be developed and followed in the application of the burn. Because of equipment, personnel and weather requirements, the application of a prescribed fire is limited to only those days that meet requirements of the burning plan. A certified prescribed burning manager should be employed to conduct the burn.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

The Mississippi Forestry Commission (on a limited basis) and other certified prescribed burning vendors are available to conduct prescribed burning.

**Site Preparation**

In stand 10 and 11, site preparation in the form of shear and raking will be applied to the cutover. The application date is scheduled for summer/fall 2015.

**Regeneration**

In stand 10 and 11, the area will be planted with Loblolly pine seedlings at a rate of 605 trees per acre. Every effort will be made to locate the best seedling available on the market. Planting is scheduled for January 2016.

*Strata 3*

Stands 2, 3, 5, 8, 9, 13, and 14

Total Acres : 372.96

**Strata Description**

Strata 3 is described as sawtimber.

Stand 2: 23.61 acres

This stand is a mixed hardwood stand , with mixed pines . The age is 45 to 55 years old. This stand is poorly stocked.

Stand 3: 77.17 acres

This stand is a mixed hardwood stand with scattered pines between 45 to 55 years old. This stand is poorly stocked.

Stand 5: 153.94 acres

Stand 13: 2.16 acres

Stand 14: 57.70 acres

These three (3) stands are a mixture of hardwoods with scattered pines. The average age is between 45 and 55 years old.

Stand 8: 32.13 acres

This stand is a mixed pine stand with scattered hardwoods between 45 and 55 years old. This stand is well stocked.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

Stand 9: 7.68 acres

This Stand is a mixed hardwood stand between 50 and 60 years old. This stand is well stocked.

**Strata Recommendations**

In this strata, the stands will be managed to a 50 to 65 year rotation. During this time frame, management activities such as thinning will be considered. Measures will be made to improve wildlife habitat will be used to keep stands in production. The smz will be maintained.

**Activity Recommendations**

**Harvest**

Stand 2, and 3 is scheduled for a regeneration cut in 2013.

Stand 8 and 13 is scheduled for a regeneration cut in 2017.

Stand 5 and 14 is scheduled for a hardwood thin in 2017.

The timber will be cruised to determine the value of the stand. The actual sale acres will be determined using GPS mapping techniques and the stand will be cruised to determine the value of the sale. The Stream Side Management Zones (SMZ's) will be protected throughout the logging operations.

**Fire Protection**

A prescribed fire is recommended for stand 8 and 13 in 2013 and again in 2016. The burn will reduce fuel loading and the potential for a wildfire to occur. A prescribed burning plan must be developed and followed in the application of the burn. Because of equipment, personnel and weather requirements, the application of a prescribed fire is limited to only those days that meet requirements of the burning plan. A certified prescribed burning manager should be employed to conduct the burn. The Mississippi Forestry Commission (on a limited basis) and other certified prescribed burning vendors are available to conduct prescribed burning.

**Site Preparation**

In stand 2 and 3, site preparation in the form of shear and raking will be applied to the cutover. The application date is scheduled for summer/fall 2015.

In stand 8 and 13, site preparation in the form of shear and raking will be applied to the cutover. The application date is scheduled for summer/fall 2018.

**Regeneration**

In stand 2 and 3, the area will be planted with Loblolly pine seedlings at a rate of 605 trees per acre. Every effort will be made to locate the best seedling available on the market. Planting is scheduled for January 2016.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

In stand 8 and 13, the area will be planted with Loblolly pine seedlings at a rate of 605 trees per acre. Every effort will be made to locate the best seedling available on the market. Planting is scheduled for January 2019.

*Strata 4*

Stands 1, 7, and 12

Total Acres : 142.95

Strata Description

Strata 4 is described as pine regeneration.

Stand 1: 112.6 acres

Stand 7: 18.40 acres

Stand 12: 11.95 acres

These three (3) stands are 1 year old, well stocked, loblolly pine plantation.

Strata Recommendations

In this strata, the stands will be managed to a 35 year rotation. During this time frame, management activities such as thinnings, mid-rotation release, and prescribed burning to improve wildlife habitat will be used to keep stands in full production.

*Strata 5*

Stands 8, 9, 13,15, 16, 17, 18, 19, 20, 21, 22, and 23

Total Acres : 88.26

Strata Description

Strata 5 is described as a sub-merchantable pine plantation.

Stand 8: 32.12 acres

Stand 9: 26.25 acres

Stand 13: 2.16 acres

Stand 15: 3.00 acres

Stand 16: 3.50 acres

Stand 17: 0.81 acres

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

Stand 18: 0.78 acres

Stand 19: 6.22 acres

Stand 20: 5.14 acres

Stand 21: 1.57 acres

Stand 22: 6.71 acres

Stand 23: 6.71 acres

These twelve (12) stands are 12 year old, well stocked, loblolly pine plantation.

**Strata Recommendations**

In this strata, the stands will be managed to a 35 year rotation. During this time frame, management activities such as thinnings, mid-rotation release, and prescribed burning to improve wildlife habitat will be used to keep stands in full production.

**Activity Recommendations**

**Fire Protection**

A prescribed fire is recommended all stands in 2014 and again in 2019. The burn will reduce fuel loading and the potential for a wildfire to occur. A prescribed burning plan must be developed and followed in the application of the burn. Because of equipment, personnel and weather requirements, the application of a prescribed fire is limited to only those days that meet requirements of the burning plan. A certified prescribed burning manager should be employed to conduct the burn. The Mississippi Forestry Commission (on a limited basis) and other certified prescribed burning vendors are available to conduct prescribed burning.

**Harvest**

A first thin will be made on all stands in 2015. The areas will be cruised to determine how much volume will be removed as well as the value of the timber to be removed.

**OTHER PLAN ACTIVITIES**

*Boundary Lines*

Routine inspections and general maintenance of the boundary lines will ensure overall appearance and aesthetics of the property.

**Line Description**

This section has approximately 4 miles of boundary lines. These lines are painted with "Red " boundary line paint. Lines are maintained periodically.

**MISSISSIPPI FORESTRY COMMISSION  
FOREST STEWARDSHIP MANAGEMENT PLAN**

Line Recommendations

This section has approximately 4 miles of boundary lines. These lines are painted with "Red " boundary line paint. Lines are maintained periodically.

Activity Recommendations

Property Activities

The boundary lines are scheduled for repainting in 2012 and again 2017.

Property Activities

Routine inspections and general maintenance of the roads, Firelanes, and boundary lines will ensure overall appearance and aesthetics of the property.
