

# FOREST STEWARDSHIP MANAGEMENT PLAN

Prepared For: Greene County BOE

Prepared By: James Shumpert MS Forestry Commission

Time Period Covered by This Plan: 2012 - 2021

Date Plan Prepared: 2012-02-17

Plan Type: Stewardship / Stewardship

This plan was developed in accordance with the rules of the Stewardship program.

**Property Name: S16 - T1N - R7W**

## LANDOWNER INFORMATION

Name: Greene County BOE

Mailing Address: 528 West Oak Street

City, State, Zip: Leakesville, MS 39451

Country: United States of America

Contact Numbers: Home Number:

Office Number: 601-394-2364 Fax Number: 601-394-5542

E-mail Address:

Social Security Number (optional): 646000392

#### FORESTER INFORMATION

Name: James Shumpert, Service Forester

Forester Number: 02470

Organization: MS Forestry Commission

Street Address: P.O. Box 428

City, State, Zip: Leakesville, MS 39451

Contact Numbers: Office Number: 601-394-2785

Fax Number: 601-947-2947

E-mail Address: jshumpert@mfc.state.ms.us

#### PROPERTY LOCATION

County: Greene Total Acres: 641 Latitude: -88.7 Longitude: 31.05

Section: 16 Township: 1N Range: 7W

#### **DISCLAIMER**

This information was derived from a small sampling of the forest resources. It reflects a statistical estimation that is only intended to be accurate enough for the purposes of making decisions for the short-term management of these resources. These estimations are temporally static. Events and circumstances may occur within the survey area that will physically alter the forest resources and therefore will not be reflected in this plan.

#### INTRODUCTION

This Forest Stewardship Management Plan will serve as a guide for accomplishing the goals and objectives for your property. In addition to addressing your specific goals and objectives, this plan includes recommendations for maintaining soil and water quality and protecting your forest from insects, disease, and wildfire. Recommendations are based on observation and assessment of the site.

## **OBJECTIVES**

Timber Production

The goal is to produce high quality sawtimber. This will be accomplished through reforestation and timber stand improvement practices such as herbicide applications, prescribed burning, thinning at specified intervals, and other silvicultural practices. Forestry Best Management Practices will be implemented to prevent erosion and protect water quality.

## Wildlife Management - General

The goal is to provide a diversity of habitats suitable for a variety of game and non-game wildlife species. Habitat management will focus on developing a variety of food, cover, water, and space. This will be accomplished by establishing and maintaining access roads and firelanes, providing openings within the forest, and the management of trees located within the Streamside Management Zone.

#### PROPERTY DESCRIPTION

General Property Information

The section is located in the Gatlin Creek Hills area of Greene County. The section is accessed by Gatlin Creek Road which runs through the section from east to west. The section also has a good network of woods roads throughout it.

Everything south of Gatlin Creek road is a pine plantation with some SMZ's in them. The plantations will need to be thinned during the term of this plan. North of Gatlin Creek Road is an area of mixed pine and hardwood sawtimber. The terrain is very steep in places. The area is unique in terrain and species composition and is located on highly erodible soils. Due, to the erodible soils special concerns should be addressed when a final harvest is conducted on these stands. These areas represent a total of  $\pm$  615 forested acres in timber management. In addition, this section has  $\pm$  23 non-forested acres with no forest management activities planned.

The rest of the area is composed of Gatlin Creek which flows from north to south through the section.

#### Water Resources

Gatlin Creek flows through the section from north to south. Perinnal and intermittent streams and drains identified will be managed in accordance with Mississippi's Best Management Practices.

#### Archeological and Cultural Resources

These areas can range from churches, old cemeteries, or Indian mounds to old home sites or other areas of historical significance.

No Archeological or Cultural resources were identified during a reconnaissance of the property. However, if Archeological or Cultural resources are discovered anytime on the

property special managements measures will be applied immediately in order preserve these sensitive areas.

#### Timber Production

The goal is to maximize the production of high quality timber. This will be accomplished through the application of timely thinning and other silvicultural practices designed to enhance timber quality and growth. Forestry Best Management Practices will be implemented to prevent erosion and protect water quality.

## Threatened and Endangered Species

The property was evaluated for the presence of threatened and endangered (T&E) species. Evidence of gopher tortoises was found on portions of this property. A more intense survey should be conducted to identify all gopher tortoise burrows within the boundaries of the property. Management activities should be designed and implemented to protect this species where the tortoise burrows are found.

## Interaction with Surrounding Property

Prescribed practices should be carried out in a manner that will minimize adverse impacts on surrounding properties. Consideration should be given to potential air, water, visual, and other impacts. In addition, practices carried out should have positive effects on the surrounding community such as improved wildlife habitat and soil stabilization.

#### Soils General

Soils were evaluated on the property to determine the suitability of the site for the proposed activities. Forest practices were planned so as to minimize erosion or other adverse effects on the soil. The soils are from blue or chalky clay to sandy loam. Site index is 90 for lobbolly pine.

#### GENERAL PROPERTY RECOMMENDATIONS

#### Forest Protection

A healthy vigorously growing stand is the best defense to an attack from a variety of forest insects, plants, and pathogens.

## Insects and Diseases

Trees are subject to attack from insects and diseases. Different insects and diseases affect trees according to the age, species, and condition of the trees. Planted stands of pines and pure stands of hardwoods are particularly susceptible to attack. Since there are many different insects and diseases, no attempt will be made here to explain all of them. The property should be inspected at least annually for possible signs of insect and disease activity. Some things to look for are:

- · Unseasonable leaf fall
- Discoloration of leaves or needles
- Pitch pockets on pine trees
- · Heavy defoliation of hardwood leaves
- Groups of three or more dying trees within a stand

This list does not cover all instances of insect or disease attacks. If anything unusual is noticed, report it to a forester. In most cases, insect and disease problems can be controlled if discovered early.

#### Fire Protection

Your forest should be protected from wildfire at all times. The best way to protect your investment is by establishing and maintaining firebreaks around the property. Guidelines for establishment and maintenance of firebreaks may be found in Mississippi Forestry Commission publication #107, *Mississippi's Best Management Practices*.

#### Grazing

Tree seedlings should be protected from grazing until such time as the terminal bud of the sapling is beyond reach of livestock. Domestic livestock should be denied access to the tree planting area.

## **Boundary Lines**

It is the responsibility of the landowner to ensure that all property lines and boundaries designating areas to receive forestry work are clearly identified and visible to all contractors.

**Note:** Some forest practices may cause temporary adverse environmental or aesthetic impacts. These practices will only cause short-term adverse impacts where they are installed. Special efforts will be made to minimize adverse effects when carrying out any of the practices. Examples include: site preparation, planting, prescribed fires, firebreak installation and maintenance, road installation and maintenance, pesticide applications and timber harvesting.

#### Cogongrass Control

Cogongrass is present on every School Trust section in Greene County. While it appears that total eradication of this invasive species is impossible, every precaution must be made to prevent further spread. Treatment costs for cogongrass control are not addressed in the activities portion of this plan due to the uncertainty of the extent of cogongrass infestation on each section. An assessment is now being made to determine the best way to treat this problem.

## Water Quality Protection

The objective of the landowner is to protect, preserve and enhance all water sources on or transecting the property. This can best be achieved by implementation of Best Management Practices in all aspects of the management of the property. Streamside management zones

will be maintained along all creeks and major drains to prevent sedimentation. Water diversions will be used where needed to prevent erosion.

#### Timber Management

Timber management goals for this property are to manage timber resources in such a manner as to maximize timber production throughout the life of the stand.

#### Recreation

According to landowner objectives the recreational use of the property could prove to be an avenue for personal enjoyment or for generating income. An evaluation of your property should be conducted and a plan developed to accomplish your specific goals for recreational activities on your property.

#### **STANDS**

1-3-M-ST-48-U (6 Acres)

## Stand Description

The stand consists of pine-hardwood hills and hollows. The terrain comprises steep slopes, gullies, and draws. Soils are highly erodible and logging would be very difficult due to the terrain. The tree species found on this stand consist of longleaf, loblolly, and shortleaf pine mixed with red oaks, white oaks, gums, beech, magnolia, and various other hardwoods. The stands average DBH is 11, with a basal area of 77, and 137 trees per acre.

#### Stand Recommendations

The stand is recommended to have a final harvest conducted on it in 2019. Once, all of the merchantable timber has been removed the stand needs to have a chemical site preparation and planted with either longleaf or loblolly pine seedlings in 2021.

#### **Activity Recommendations**

#### Harvest

The stand should have a final harvest conducted on it in 2019 and remove all merchantable timber.

#### Site Preparation

The stand is recommended to have an aerial application of herbicides applied in the summer prior to replanting. The application of herbicide will reduce the amount of competing vegetation on the stand, which will provide an establishment period for the pine seedling that will be planted the following winter.

#### Regeneration

The site will be planted during January of 2021 with genetically improved loblolly pine or containerized longleaf seedling on a 6 by 12 foot spacing with a target of 605 trees per acre.

#### 3-6-M-ST-48-U (77 Acres)

## Stand Description

The stand consists of pine-hardwood hills and hollows. The terrain comprises steep slopes, gullies, and draws. Soils are highly erodible and logging would be very difficult due to the terrain. The tree species found on this stand consist of longleaf, loblolly, and shortleaf pine mixed with red oaks, white oaks, gums, beech, magnolia, and various other hardwoods. The stands average DBH is 11, with a basal area of 77, and 137 trees per acre.

#### **Stand Recommendations**

The stand is recommended to have a final harvest conducted on it in 2021. Once, all of the merchantable timber has been removed the stand needs to have a chemical site preparation and planted with either longleaf or loblolly pine seedlings.

## **Activity Recommendations**

#### Harvest

The stand should have a final harvest conducted on it in 2021 and remove all merchantable timber.

## 4-5-M-ST-48-U (9 Acres)

#### Stand Description

The stand consists of pine-hardwood hills and hollows. The terrain comprises steep slopes, gullies, and draws. Soils are highly erodible and logging would be very difficult due to the terrain. The tree species found on this stand consist of longleaf, loblolly, and shortleaf pine mixed with red oaks, white oaks, gums, beech, magnolia, and various other hardwoods. The stands average DBH is 11, with a basal area of 77, and 137 trees per acre.

#### Stand Recommendations

The stand is recommended to have a final harvest conducted on it in 2020. Once, all of the merchantable timber has been removed the stand needs to have a chemical site preparation and planted with either longleaf or loblolly pine seedlings.

## **Activity Recommendations**

## Harvest

The stand should have a final harvest conducted on it in 2020 and remove all merchantable timber.

#### 5-4-P-RP-0-U (27 Acres)

#### Stand Description

The stand had a final harvest completed on it in 2010 and was replanted in February of 2011 with bare root second generation loblolly pine seedling with a target of 605 trees

per acre on a 6 by 12 foot spacing. The survival was conducted the falling year resulting in 505 trees per acres living. The terrain of the stand comprises steep slopes, gullies and draws. Soils are highly erodible and logging is difficult due to the terrain.

#### Stand Recommendations

The stand is recommended to serve as cover for wildlife.

The stand has no timber harvesting activities recommended for the duration of this plan.

## 6-1-M-PW-48-B (70 Acres)

## Stand Description

The stand is made up of small creeks and drains, which will be managed as a Stream side Management Zone (SMZ). The timber type is primarily hardwood pulpwood with some scattered slash pine sawtimber mixed in. The primary species of hardwood are sweet bay, black gum, red maple, yellow poplar, beech, magnolia, and water oak.

#### Stand Recommendations

The stand should have all merchantable pine that is over mature, damaged, suppress, and diseased marked to be remove when the adjacent stand's harvest is conduct. The basal area will be reduce to no lower than 55 so it will open the tree canopy and increase the diameter and height of the remaining timber. All Mississippi's Best Management Practices (BMP's) will be followed when harvest is conducted.

The stand is recommended to be managed as a corridor to provide wildlife species food and cover, and to preserve water quality.

#### 7-2-P-PW-18-U (124 Acres)

## Stand Description

The stand consists of mainly slash pine that was planted in 1993; however, there are also some natural loblolly pines mixed into the stand. The product that is mostly found on the site is in the pulpwood size class; there are also some scattered chip-n-saw trees throughout the stand. The stands average DBH is 7, with a basal area of 115, and 390 trees per acre.

#### Stand Recommendations

The stand is recommended to be thinned in 2013. A prescribe burn should be carried out every three or four years to control undesirable vegetation and hardwood species.

#### **Activity Recommendations**

#### Harvest

The stand should be thinned in 2013 to reduce the basal to 65 and leave about 180 trees per acre.

#### Fire Protection

A prescribed fire is recommended for this site in order to reduce fuel loading and the potential for a wildfire to occur. A prescribed burning plan must be developed and followed in the application of the burn. Because of equipment, personnel and weather requirements, the application of a prescribed fire is limited to only those days that meet requirements of the burning plan. A certified prescribed burning manager should be employed to conduct the burn. The Mississippi Forestry Commission (on a limited basis) and other certified prescribed burning vendors are available to conduct prescribed burning.

The stand is recommended to have a prescribe burn conducted in 2016 and again in 2020 to reduce the amount of debris, undesirable vegetation, and hardwood completion.

#### 9-1-M-PW-48-B (27 Acres)

#### Stand Description

The stand is made up of small creeks and drains, which will be managed as a Stream side Management Zone (SMZ). The timber type is primarily hardwood pulpwood with some scattered slash pine sawtimber mixed in. The primary species of hardwood are sweet bay, black gum, red maple, yellow poplar, beech, magnolia, and water oak.

#### Stand Recommendations

The stand should have all merchantable pine that is over mature, damaged, suppress, and diseased marked to be remove when the adjacent stand's harvest is conduct. The basal area will be reduce to no lower than 55 so it will open the tree canopy and increase the diameter and height of the remaining timber. All Mississippi's Best Management Practices (BMP's) will be followed when harvest is conducted.

The stand is recommended to be managed as a corridor to provide wildlife species food and cover, and to preserve water quality.

## 10-2-P-PW-18-U (95 Acres)

#### Stand Description

The stand consists of mainly slash pine that was planted in 1993; however, there are also some natural loblolly pines mixed into the stand. The product that is mostly found on the site is in the pulpwood size class; there are also some scattered chip-n-saw trees throughout the stand. The stands average DBH is 7, with a basal area of 115, and 390 trees per acre.

#### Stand Recommendations

The stand is recommended to be thinned in 2013. A prescribe burn should be carried out every three or four years to control undesirable vegetation and hardwood species.

#### **Activity Recommendations**

#### Harvest

The stand should be thinned in 2013 to reduce the basal to 65 and leave about 180 trees per acre.

#### Fire Protection

A prescribed fire is recommended for this site in order to reduce fuel loading and the potential for a wildfire to occur. A prescribed burning plan must be developed and followed in the application of the burn. Because of equipment, personnel and weather requirements, the application of a prescribed fire is limited to only those days that meet requirements of the burning plan. A certified prescribed burning manager should be employed to conduct the burn. The Mississippi Forestry Commission (on a limited basis) and other certified prescribed burning vendors are available to conduct prescribed burning.

The stand is recommended to have a prescribe burn conducted in 2016 and again in 2020 to reduce the amount of debris, undesirable vegetation, and hardwood completion.

#### 11-1-M-PW-48-B (5 Acres)

## Stand Description

The stand is made up of small creeks and drains, which will be managed as a Stream side Management Zone (SMZ). The timber type is primarily hardwood pulpwood with some scattered slash pine sawtimber mixed in. The primary species of hardwood are sweet bay, black gum, red maple, yellow poplar, beech, magnolia, and water oak.

#### Stand Recommendations

The stand should have all merchantable pine that is over mature, damaged, suppress, and diseased marked to be remove when the adjacent stand's harvest is conduct. The basal area will be reduce to no lower than 55 so it will open the tree canopy and increase the diameter and height of the remaining timber. All Mississippi's Best Management Practices (BMP's) will be followed when harvest is conducted.

The stand is recommended to be managed as a corridor to provide wildlife species food and cover, and to preserve water quality.

12-1-M-PW-48-B (4 Acres)

## Stand Description

The stand is made up of small creeks and drains, which will be managed as a Stream side Management Zone (SMZ). The timber type is primarily hardwood pulpwood with some scattered slash pine sawtimber mixed in. The primary species of hardwood are sweet bay, black gum, red maple, yellow poplar, beech, magnolia, and water oak.

#### Stand Recommendations

The stand should have all merchantable pine that is over mature, damaged, suppress, and diseased marked to be remove when the adjacent stand's harvest is conduct. The basal area will be reduce to no lower than 55 so it will open the tree canopy and increase the diameter and height of the remaining timber. All Mississippi's Best Management Practices (BMP's) will be followed when harvest is conducted.

The stand is recommended to be managed as a corridor to provide wildlife species food and cover, and to preserve water quality.

#### 13-2-P-PW-18-U (71 Acres)

#### Stand Description

The stand consists of mainly slash pine that was planted in 1993; however, there are also some natural loblolly pines mixed into the stand. The product that is mostly found on the site is in the pulpwood size class; there are also some scattered chip-n-saw trees throughout the stand. The stands average DBH is 7, with a basal area of 115, and 390 trees per acre.

#### Stand Recommendations

The stand is recommended to be thinned in 2013. A prescribe burn should be carried out every three or four years to control undesirable vegetation and hardwood species.

#### **Activity Recommendations**

#### Harvest

The stand should be thinned in 2013 to reduce the basal to 65 and leave about 180 trees per acre.

#### Fire Protection

A prescribed fire is recommended for this site in order to reduce fuel loading and the potential for a wildfire to occur. A prescribed burning plan must be developed and followed in the application of the burn. Because of equipment, personnel and weather requirements, the application of a prescribed fire is limited to only those days that meet requirements of the burning plan. A certified prescribed burning manager should be employed to conduct the burn. The Mississippi Forestry Commission (on a limited basis) and other certified prescribed burning vendors are available to conduct prescribed burning.

The stand is recommended to have a prescribe burn conducted in 2016 and again in 2020 to reduce the amount of debris, undesirable vegetation, and hardwood completion.

#### 14-3-M-ST-48-U (41 Acres)

## Stand Description

The stand consists of pine-hardwood hills and hollows. The terrain comprises steep slopes, gullies, and draws. Soils are highly erodible and logging would be very difficult due to the terrain. The tree species found on this stand consist of longleaf, loblolly, and shortleaf pine mixed with red oaks, white oaks, gums, beech, magnolia, and various other hardwoods. The stands average DBH is 11, with a basal area of 77, and 137 trees per acre.

#### Stand Recommendations

The stand is recommended to have a final harvest conducted on it in 2019. Once, all of the merchantable timber has been removed the stand needs to have a chemical site preparation and planted with either longleaf or loblolly pine seedlings in 2021.

#### **Activity Recommendations**

#### Harvest

The stand should have a final harvest conducted on it in 2019 and remove all merchantable timber.

#### Site Preparation

The stand is recommended to have an aerial application of herbicides applied in the summer prior to replanting. The application of herbicide will reduce the amount of competing vegetation on the stand, which will provide an establishment period for the pine seedling that will be planted the following winter.

#### Regeneration

The site will be planted during January of 2021 with genetically improved loblolly pine or containerized longleaf seedling on a 6 by 12 foot spacing with a target of 605 trees per acre.

#### 15-5-M-ST-48-U (59 Acres)

#### Stand Description

The stand consists of pine-hardwood hills and hollows. The terrain comprises steep slopes, gullies, and draws. Soils are highly erodible and logging would be very difficult due to the terrain. The tree species found on this stand consist of longleaf, loblolly, and shortleaf pine mixed with red oaks, white oaks, gums, beech, magnolia, and various other hardwoods. The stands average DBH is 11, with a basal area of 77, and 137 trees per acre.

## Stand Recommendations

The stand is recommended to have a final harvest conducted on it in 2020. Once, all of the merchantable timber has been removed the stand needs to have a chemical site preparation and planted with either longleaf or loblolly pine seedlings.

#### **Activity Recommendations**

Harvest

The stand should have a final harvest conducted on it in 2020 and remove all merchantable timber.

#### OTHER PLAN ACTIVITIES

Boundary Lines

Line Recommendations

The section's boundary lines are well established and recommended to be maintained on a five year rotation.

## **Activity Recommendations**

**Property Activities** 

The boundary line will be painted in 2013, 2018, and will be maintained on a 5 year cycle. Routine inspections and general maintenance of the boundary lines will ensure overall appearance and aesthetics of the property.
