

# FOREST STEWARDSHIP MANAGEMENT PLAN

Prepared For: Humphreys County Schools

Prepared By: Wesley James Howard MS Forestry Commission

Time Period Covered by This Plan: 2012 - 2021

Date Plan Prepared: 2012-02-13

Plan Type: Stewardship / Stewardship

This plan was developed in accordance with the rules of the Stewardship program.

**Property Name: S16-T13N-R3W**

#### LANDOWNER INFORMATION

Name: Humphreys County Schools

Mailing Address: 401 4th st

City, State, Zip: Belzoni, MS 39038 Country: United States of America

Contact Numbers: Home Number:

Office Number: 662-247-6000 Fax Number: 662-247-6004

E-mail Address:

Social Security Number (optional):

#### FORESTER INFORMATION

Name: Wesley James Howard, Service Forester

Forester Number: 02521

Organization: MS Forestry Commission

Street Address: 9600 Hwy 17

City, State, Zip: Carrollton, MS 38917

Contact Numbers: Office Number: 662-237-6732

Fax Number:

E-mail Address: whoward@mfc.state.ms.us

#### PROPERTY LOCATION

County: Humphreys Total Acres: 640 Latitude: -90.51 Longitude: 32.97

Section: 16 Township: 13N Range: 3W

#### **DISCLAIMER**

This information was derived from a small sampling of the forest resources. It reflects a statistical estimation that is only intended to be accurate enough for the purposes of making decisions for the short-term management of these resources. These estimations are temporally static. Events and circumstances may occur within the survey area that will physically alter the forest resources and therefore will not be reflected in this plan.

#### INTRODUCTION

This Forest Stewardship Management Plan will serve as a guide for accomplishing the goals and objectives for your property. In addition to addressing your specific goals and objectives, this plan includes recommendations for maintaining soil and water quality and protecting your forest from insects, disease, and wildfire. Recommendations are based on observation and assessment of the site.

### **OBJECTIVES**

#### Timber Production

The goal is to produce high quality sawtimber. This will be accomplished through reforestation and timber stand improvement practices such as herbicide applications, prescribed burning, thinning at specified intervals, and other silvicultural practices. Forestry Best Management Practices will be implemented to prevent erosion and protect water quality.

#### Wildlife Management - General

The goal is to provide a diversity of habitats suitable for a variety of game and non-game wildlife species. Habitat management will focus on developing a variety of food, cover, water, and space. This will be accomplished by establishing and maintaining access roads and firelanes, providing openings within the forest, and the management of trees located within the Streamside Management Zone

#### PROPERTY DESCRIPTION

#### General Property Information

Sectionn16\_T13N\_R3W is +/- 639 acres of agriculture fields and bottomland hardwood forest. The forested consists of 39 acres. Timber consists of mature bottomland hardwood sawtimber. Dominate species being willow oak and nuttall oak. The section is located 5 miles east of Louise, Mississippi county roads 12 and 381 run throughout the section. Property's topography is low but the section is well drained.

#### Water Resources

The section contains a diversion canal for the Yazoo River, as well as perennial and intermittent streams throughout the section. The section drains into the Yazoo River watershed. Mississippi's Best Management Practices will be followed at all times during any management activities.

#### Timber Production

The goal is to maximize the production of high quality timber. This will be accomplished through the application of timely thinning and other silvicultural practices designed to enhance timber quality and growth. Forestry Best Management Practices will be implemented to prevent erosion and protect water quality.

#### Threatened and Endangered Species

No threatened and endangered species were identified during the reconnaissance and evaluation of this property.

If any threatened and /or endangered species are discovered, immediate management procedures will be applied to protect these sensitive natural resources for future generations.

#### *Interaction with Surrounding Property*

Prescribed practices should be carried out in a manner that will minimize adverse impacts on surrounding properties. Consideration should be given to potential air, water, visual, and other impacts. In addition, practices carried out should have positive effects on the surrounding community such as improved wildlife habitat and soil stabilization.

#### Soils General

Soils were evaluated on the property to determine the suitability of the site for the proposed activities. Forest practices were planned so as to minimize erosion or other adverse effects on the soil. Mississippi Best Management Practices will be implemented to prevent any adverse effects.

#### Archeological and Cultural Resources

No Archeological or Cultural resources were identified during a reconnaissance of the property. However, if Archeological or Cultural resources are discovered anytime on the property special managements measures will be applied immediately in order preserve these sensitive areas.

### GENERAL PROPERTY RECOMMENDATIONS

#### Forest Protection

A vigorous growing stand is the best defense to an attack from a variety of forest insects, plants and pathogens.

**Note:** Some forest practices may cause temporary adverse environmental or aesthetic impacts. These practices will only cause short-term adverse impacts where they are installed. Special efforts will be made to minimize adverse effects when carrying out any of the practices. Examples include: site preparation, planting, prescribed fires, firebreak installation and maintenance, road installation and maintenance, pesticide applications and timber harvesting.

#### **Insects and Diseases**

Trees are subject to attack from insects and diseases. Different insects and diseases affect trees according to the age, species, and condition of the trees. Planted stands of pines and pure stands of hardwoods are particularly susceptible to attack. Since there are many different insects and diseases, no attempt will be made here to explain all of them. The property should be inspected at least annually for possible signs of insect and disease activity. Some things to look for are:

- Unseasonable leaf fall
- Discoloration of leaves or needles
- Pitch pockets on pine trees
- · Heavy defoliation of hardwood leaves
- Groups of three or more dying trees within a stand

This list does not cover all instances of insect or disease attacks. If anything unusual is noticed, report it to a forester. In most cases, insect and disease problems can be controlled if discovered early.

#### Fire Protection

Your forest should be protected from wildfire at all times. The best way to protect your investment is by establishing and maintaining firebreaks around the property. Guidelines for establishment and maintenance of firebreaks may be found in Mississippi Forestry Commission publication #107, *Mississippi's Best Management Practices*.

#### Grazing

Tree seedlings should be protected from grazing until such time as the terminal bud of the sapling is beyond reach of livestock. Domestic livestock should be denied access to the tree planting area.

#### **Boundary Lines**

Currently boundaries are not clearly marked on the section. Boundaries should be surveyed and clearly marked especially on the South boundary of the section. This part of the section is still in timber and meets another landowner's property. Boundaries will need to be established before any management activities such as harvesting can take place. Once the boundaries have been surveyed the MFC will maintain these boundaries.

#### Water Quality Protection

The objective of the landowner is to protect, conserve, and enhance all water resources and drainages on or transecting the property. This objective can be met by implementing Mississippi's Best Management Practices in all aspects of management practices. Protection for water resources must be given in order to maintain the water quality. This protection will be done by the use of stream side management zones (SMZ's) as well as following all Mississippi Best Management Practices.

#### Aesthetics

The goal is to assure that the property is managed in such a way that is aesthetically pleasing to the landowner as well as the community. Activities could include, maintaining buffer strips along the road and adjacent to the home site, planting wildflowers along the road, and trees with attractive fall and spring color along the drive and near the home site.

#### **Ecological Restoration**

Ecological restoration is the process of assisting the recovery of an ecosystem that has been degraded, damaged, or destroyed. A reconnaissance of the property has been conducted and no ecological restoration activities are recommended at this time.

#### Environmental Education

Environmental educational goals are to provide educational opportunities for children and adults through the development of items such as nature trails with tree identification markers, wildlife viewing areas, picnic areas, parking, public restroom facilities "etc".

#### Wildlife Management General

The goal is to provide a diversity of habitats suited for a variety of game and non-game wildlife species. Habitat management will focus on providing a variety of food, cover, water, and space. This will be accomplished, in part, by establishing and maintaining access roads and firelanes, providing openings within the forest, and leaving mast producing and den trees.

#### Timber Management

Timber management goals for this property are to manage timber resources in such a manner as to maximize timber production throughout the life of the stand.

#### Recreation

According to landowner objectives the recreational use of the property could prove to be an avenue for personal enjoyment or for generating income. An evaluation of your property should be conducted and a plan developed to accomplish your specific goals for recreational activities on your property.

#### **STRATA**

Strata 1

Strata Description

This 39 acre strata is made up of two stands (#2 and #4). This strata was approximately established in 1928. This stand is a fully stocked bottomland hardwood mixed forest with willow oak and nuttall oak being the dominate species. This strata has a basal area of 101 and 110 trees per acre. This strata contains 30 tons of pulpwood and 33 tons of sawtimber per acre. The Yazoo River diversion canal joins stand #4 as well as other perennial streams and intermittent streams run through stand # 2.

#### Strata Recommendations

Stands 2 and 4 will be managed as Stream Side Management Zones throughout the plan period. Stands #2 and #4 will be evaluated during the 10 year period. Mississippi Best Management Practices require a minimum buffer of 35 feet and minimum 50% of canopy to be left. Stands join major water resources and will left to maintain guidelines set by MBMP's.

#### Strata Activities

During the time frame of the plan monitoring will be conducted periodically to ensure the stands are in good vigor condition and no major transformations have occurred. Stands will provide travel corridors for native wildlife species.

#### Strata 2 (Non-Forest)

# Strata Description

This 600 acre strata consists of stands #1, #3 and #5. Stata 2 consists of agricultural land, Yazoo River diversion canal, and other perennial waterways. The Humphreys County School board leases the land for agricultural production.

#### Strata Recommendations

HumphreysCounty School Board leases 523 acres of this strata for agriculture production. The agriculture lease provides an annual income of \$25,680. The agriculture lease provides the highest and best use for this stand.

#### Strata Activities

During the time frame of the plan monitoring will be conducted periodically to insure no damaging activities are occurring that could impact other stands on the section. No activities are planed for the time period of the plan.
